EDUCATION

Northeastern University — M.S. in Data Analytics Engineering · **GPA 3.95/4.0** *Dec 2026*

Anna University — B.E. in Electronics and Communication Engineering · **GPA 3.5/4.0** *May 2024*

EXPERIENCE

Software & Data Engineer Intern | RightRev, USA *Jan 2026 – Jul 2026*

- Developed **Snowflake Cortex AI agents**, **SQL stored procedures**, and MCP integrations so business teams could get revenue insights without manual analysis
- Debugged a **tenant isolation** defect while migrating **18 AI agents** to production, audited **200+ Snowflake views**, and used OAuth and RBAC to protect customer data
- Integrated **Salesforce CRM APIs** with 5 AI agents and automated SQL and JSON validation tests to catch data errors before they affected financial reports
- Developed **frontend features** and **backend API integrations** with senior engineers; incorporated code review feedback to improve usability and maintainability

Data Analyst & Engineer | Flare Innovation, Chennai, India *Jan 2024 – Aug 2024*

- Built **Power BI dashboards** using PostgreSQL and Airtable APIs to track **operational KPIs**, cutting reporting latency by **30%** for business and engineering teams
- Automated **data extraction** with **Python ETL pipelines** for **1M+ IoT records** in PostgreSQL and Airtable; added schema checks to catch bad data before reporting
- Improved device reliability by **25%** by using **Python** to detect **sensor anomalies** and **SQL transformations** to prepare data; benchmarked PySpark at scale
- Supported the **full code lifecycle** for **Python** data workflows, from development and **automated testing** to GitHub Actions CI/CD and Docker packaging

Machine Learning Engineer | Sri Sairam Techno Incubator Foundation, Chennai, India *Jun 2022 – Oct 2022*

- Secured 6th place globally among 320+ teams at the Singapore AUV Challenge by developing autonomous underwater navigation and object detection capabilities
- Trained and integrated YOLOv5 computer vision models with OpenCV for real-time underwater object detection, supporting autonomous navigation and object recognition
- Developed reinforcement learning-based control systems integrated with ROS, achieving a 92% success rate in obstacle avoidance, gate traversal, and object recovery across Gazebo simulations and real-world pool tests

PROJECTS

Charlie — MBTA Real-Time Chatbot 3rd Place, Google MLOps Expo

- Built **real-time ETL pipelines** with **Python**, Apache Airflow, PySpark, and Azure to turn live MBTA data into features for transit delay prediction
- Deployed Dockerized **Azure ML** services with autoscaling and automated retraining; used Prometheus and Slack alerts to detect and troubleshoot service failures
- Built a GPT-powered RAG assistant for live transit queries and evaluated retrieval quality, reaching **92% precision** on route and schedule questions

Event Processing & Monitoring Dashboard

- Built a **Python** simulator and dashboard for **143K synthetic transaction events**; validated the project with 11 passing unit tests and **5 passing CI jobs**
- **Planned extension: React and TypeScript** dashboard, **Django API**, and **Go event worker** on **AWS EC2** with **Amazon Aurora (RDS)** provisioned via **Terraform**

SKILLS & CERTIFICATIONS

Languages & Engineering :	SQL, **Python**, R, REST APIs, Apache Spark (PySpark), Apache Airflow, ETL/ELT
Cloud & Databases :	**AWS (S3)**, Microsoft Azure (**Azure ML**), Snowflake, BigQuery, PostgreSQL
AI & Analytics :	AI Agents, Event Processing, **Automated Testing**, **Production Monitoring**
Quality & DevOps :	Data Quality, RBAC, OAuth, Git, GitHub Actions, CI/CD, Prometheus, PyTest
Certifications :	Google Data Analytics Professional Certificate, Cisco Data Analytics Essentials, AWS Cloud Practitioner Essentials
